RENDER TREE

The **CSS Object Model** is a set of APIs allowing the manipulation of CSS from JavaScript. It is much like the DOM, but for the CSS rather than the HTML. It allows users to read and modify CSS style dynamically.

Selectors

Declaration block

In CSS, selectors declare which part of the markup a style applies to by matching tags and attributes in the markup itself.

Consists of a list of declarations in braces. Each declaration itself consists of a property, a colon **:** and a value. If there are multiple declarations in a block, a semi-colon **;** must be inserted to separate each declaration.

.exampleClass

#exampleID
